PROJECT

Student Report Card

https://github.com/Himanshu1852002/1C_Project.git

- I developed a comprehensive student report card system designed to manage and display students' academic results over three years in college. The system allows users to efficiently handle student data, including adding, removing, and updating marks, with an integrated search feature to simplify data management. Additionally, the system can generate detailed PDF reports of student results.

Technologies Used

- Front-end: Java Swing for creating a graphical user interface.
- Backend: Java for business logic and processing.
- Database:- MySQL for storing student data.
- PDF Generation: iText library for generating a PDF report
